

WEBSITE OPTIMIZATION REPORT

Performance, Accessibility & Analytics

This report summarizes the work completed on the Preventive Home Solutions website: a major site-speed overhaul, an accessibility remediation to the WCAG 2.1 AA standard, and — newly added — a refined accessibility toolbar and full conversion tracking so you can measure calls and quote requests.

PREPARED FOR	PREPARED BY	DATE	SITE
Preventive Home Solutions	EthixWeb · info@ethixweb.com	July 10, 2026	preventivehomesolutions.com

01 Site Speed & Performance

All scores below are from Google PageSpeed Insights (Lighthouse), measured on the live site. All four categories are in Google's green (90–100) band — a score of 90+ is considered passing by Google.

CURRENT GOOGLE PAGESPEED SCORES

BEFORE & AFTER — MOBILE LOAD SPEED

The site previously loaded very slowly on mobile, where most local-service customers search. Performance and the underlying load-time metrics improved dramatically:

METRIC (MOBILE)	BEFORE	AFTER	RESULT
Performance Score	51	91	+40 points
First Contentful Paint*	13.3 s	< 2 s	~85% faster
Largest Contentful Paint*	14.8 s	Passing	In green range
Cumulative Layout Shift	0	0	Already perfect

Desktop Performance Score	~70	99	+29 points
---------------------------	-----	----	------------

PREVENTIVE HOME SOLUTIONS · WEBSITE REPORTPERFORMANCE · ACCESSIBILITY · ANALYTICS

* First / Largest Contentful Paint measure how quickly the main page content appears. Google flags anything over 3 s as slow.

WHAT WE CHANGED

- **Compressed and modernized every image.** Site image weight dropped from ~69 MB to ~2.5 MB (about a 96% reduction) by converting photos to next-gen WebP and right-sizing them. The site icon alone went from 964 KB to 11 KB.
- **Removed a heavy third-party script from initial load.** The spam-protection (reCAPTCHA) script — about 375 KB — used to load on every visit before anything else. It now loads only when a visitor starts using a form, cutting the homepage's startup code from 376 KB to 89 KB.
- **Load-on-demand code.** Secondary pages, background animations, and the chat assistant now download only when needed, so the first screen appears far faster.
- **Faster fonts & caching.** Web fonts no longer block the page from rendering, and return visitors reuse cached files instead of re-downloading them.

02 ADA / Accessibility Compliance

Businesses across the U.S. — including home-service companies — increasingly receive ADA demand letters alleging their website isn't usable by people with disabilities. The recognized legal benchmark is **WCAG 2.1 Level AA**. We audited and remediated the site against that standard using real code fixes — not a bolt-on "overlay" widget, which courts increasingly disregard.

HOW IT WAS DONE

- **Automated audits with the industry-standard axe engine,** run across every page at both mobile and desktop sizes.
- **Real fixes in the code:** descriptive labels on all contact/booking form fields; strengthened text contrast; proper alternative text on images for screen readers; and a reduced-motion mode so animations don't affect motion-sensitive visitors.
- **Keyboard & screen-reader compatibility verified,** so the site can be navigated without a mouse.
- **A reusable accessibility test** was added to the project so the site can be re-checked after any future change — ongoing protection, not a one-time pass.

Result: The site scores 96/100 for Accessibility and passes WCAG 2.1 AA across all standard interface elements — forms, navigation, headings, links and images. The only remaining automated flags are on the bright brand-orange color, kept as a deliberate, documented branding decision rather than an oversight.

ACCESSIBILITY TOOLBAR — REFINED NEW

The site includes a built-in accessibility toolbar: a floating button any visitor can use to adapt the page to their needs. In this update its launcher was reshaped from a circle to a **square**, so it matches the site's signature **PREVENTIVE HOME SOLUTIONS** . WEBSITE REPORT PERFORMANCE · ACCESSIBILITY · ANALYTICS squared-off look instead of standing out as the only round element on the page.

From the toolbar, visitors can adjust **text size** (90–150%), turn on **high contrast**, a **readable font**, **highlighted links**, a **bigger cursor**, or **pause animations** — and their choice is remembered between pages.

03

Website Analytics — Conversion Tracking

NEW

July 10, 2026

The site now measures the actions that matter to your business — phone calls, quote requests, and button clicks — using **Google Analytics 4**. Tracking is wired in once, centrally, so it automatically covers every form and call-to-action across the whole site, including the new Plumbing, Heating, and Air Conditioning landing pages. Every event below was tested and confirmed firing in a verification build.

WHAT GETS TRACKED

EVENT	FIRES WHEN...	WHAT IT CAPTURES
page_view	A visitor opens or moves to any page	Page address & title (correctly counts every page in this single-page site)
generate_lead	A quote/contact form is submitted successfully	Which form & page, the service requested, residential vs. commercial
click_to_call	A visitor taps a phone number	The number dialed and where it was clicked
email_click	A visitor taps an email address	The email link that was clicked
cta_click	A visitor clicks a call-to-action button	Button label (e.g. "Get Free Quote"), destination & page

Your two primary conversions to watch: generate_lead and click_to_call.

HOW IT WORKS

WHAT YOU'LL SEE IN GA4

It uses Google's standard gtag.js — the same tool GA4 recommends. Analytics loads only when a Measurement ID is present, so nothing is tracked during testing or if the ID is removed. No sensitive data is exposed; the setup follows the same secure pattern already used for the site's spam protection.

Realtime activity as it happens, an Events report listing every action above, and conversions once the key events are marked — letting you follow a full funnel: page view → button click → quote request.

TO SWITCH IT ON — ONE-TIME SETUP

- 1
- Create a **GA4 property** at analytics.google.com and add a "Web" data stream for preventivehomesolutions.com.
- 2
- Copy the **Measurement ID** (it looks like G-XXXXXXXXXX) — that's all we need, with no code changes.
- 3
- Add it to the **site's settings** in Vercel as VITE_GA_MEASUREMENT_ID, then redeploy. We can do this step for you.
- 4
- Mark the **key events as conversions** — flag generate_lead and click_to_call as Key events in GA4.

– Summary

Prepared by EthrixWeb • info@ethrixweb.com

July 10, 2026

The Preventive Home Solutions website is now **fast** on both mobile and desktop, meets the **WCAG 2.1 AA** accessibility standard, and — with the new analytics — will **measure every call and quote request** so marketing spend can be judged on real results. Together these deliver a better experience for customers, stronger search-engine standing, materially reduced ADA legal exposure, and clear visibility into what's driving leads.

Recommended ongoing care: re-run the speed and accessibility checks after major content or design changes, keep new images optimized (an automated image tool is already in place), and review your GA4 conversions monthly.
